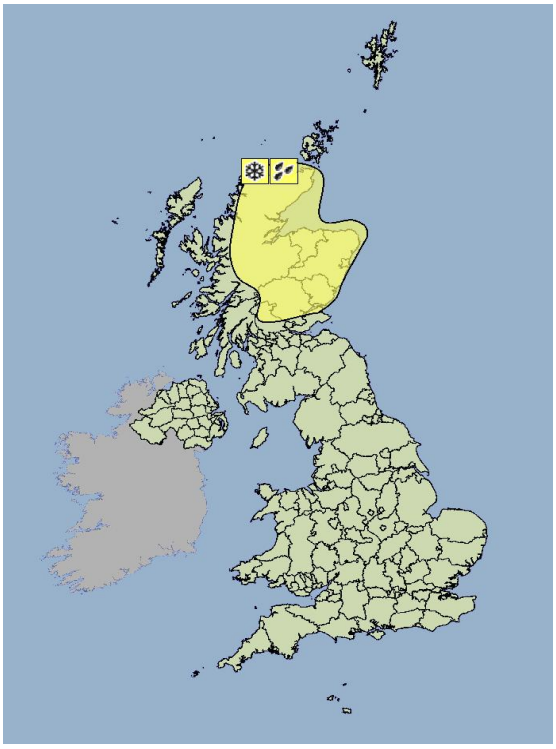
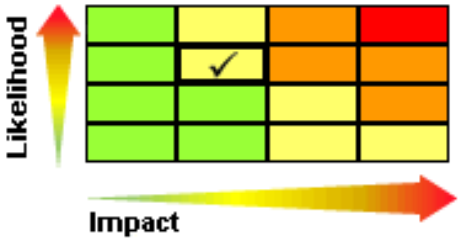
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A band of rain, sleet and snow will continue to affect northern and eastern Scotland on Tuesday afternoon gradually easing from the south later in the afternoon and during the evening. 5-10 cm of snow is likely to accumulate over higher routes, above 200 m, with 10-15 cm possible on the highest routes above 400 m. Below 200 m mostly rain or sleet is expected and 20-30 mm of rain is possible along eastern coastal regions. However some wet snow could give localised slushy accumulations to lower levels at times. The rain combined with snow melt may lead to some surface flooding of roads. Clearer spells overnight may lead to some icy surfaces.

The Met Office have issued a **Yellow Warning** of **Rain and Snow**

Valid from **13:00 on Tue, 06th Mar 2018** until **23:00 on Tue, 06th Mar 2018**

A spell of persistent rain, with snow mainly affecting high ground, will continue to affect much of northern and eastern Scotland this afternoon and into the evening.

Delays to travel and public transport could occur from snow on higher ground. Spray and flooding on low level roads will probably make journey times longer.
